

New Orleans Levees

KM26 Magnetic Level Gauge

Several **KM26 Magnetic Level Gauges** have been sold for diesel tanks involved in the new pump stations located in New Orleans.

These new pumps are powered by diesel that will be used to pump water out of the canals when the newly installed locks are closed.

The locks were installed after Hurricane Katrina on the 17th street canal at the point that the levee broke, as well as all other canals in New Orleans.

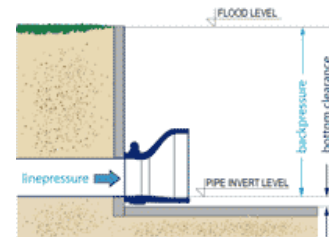

In the event of a hurricane, the locks will be closed to protect the canals from future hurricane storm surges, and the city pumps will continue to pump rain water from the streets into the canals. These newly built pump stations will pump water out of the canals and into the lake since the locks are closed. Our **Magnetic Level Gauges** are measuring and indicating the diesel fuel storage tanks that fuel these pumps.
